                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polynucleotides encoding them. The receptors, or their portrions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisers or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents CDNA encoding the mouse DCRS7 polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

The invention relates to modulating (M1) activity of cell, by contacting cell with an agonist or antagonist of DNAX cytokine receptor subunit cell with an agonist or antagonist of DNAX cytokine receptor subunit coll modulates psoriasis, conflammatory bowel disorder. (IBD), interstitial lung disorder, asthma or inflammatory bowel disorder. Also provided are methods for treating (M2) alsorders which involves administration of the modulator and canagoning (M3) a disorder as mentioned above that involves contacting a diagnosing (M3) a disorder with a binding composition that specifically cample from a test subject with a binding composition that specifically collidate to a polypeptide or nucleic acid of DCRS9 or IL-17C. (M1) is useful collidation and adisorder such as psoriasis, IBD, interstitial ung disorder such as psoriasis, where the interstitial lung disorder such as postasis, where the cinterstitial lung disorder is idiopathic pulmonary fibrosis, eosinophilic interstitute collidate. The present sequence represents a mouse DCRS7 collecative cDNA.

Co polypeptide, with 854 or greater equence identity to a polypeptide with

co sequence appearing as AAU98781-AAU98792, where IL-17RL binds to an III-

Co a sequence appearing as AAU98781-AAU98792, where IL-17RL binds to an III-

CC 17 selected from IL-17A, IL-17C, IL-17R and IL-17R. Also included

CC are IL-17RL polynucleotides, antibodies, expressiveness of a prostate

CC cont cells, a method of determining the aggressiveness of a prostate

CC care cell, by determining the presence or absence in the cell of a

Cancer cell, by determining the presence or absence in the cell of a

Cancer cell, by determining the presence or absence in the cell of a

CC call indicates that the cancer is more aggressive than a like cell in

Which the group is present) and a mammalian cell comprising a

Which the group is present) and antegenchymal stem cell is selected

CC polynucleotide encoding an IL-17B antegonist, where the cell is selected

CC polynucleotide is useful for the manufacture of a medicament to medulate

CC cartilage or bone growth in a mammal. The polynucleotide is useful for

CC cartilage or bone growth in a mammal. The polynucleotide is useful for

CC cartilage or calcification in a mammal. IL-17RL is useful for inhibiting

CC cartilage or calcification in a mammal selected from pathological

CC cartilage or calcification for diagnosing a cartilage degenerative

CC disorder in a mammal, for inhibiting the rate of proteoglycan synthesis

CC disorder in a mammal, for inhibiting the rate of proteoglycan synthesis

CC disorder in a mammal, for inhibiting the rate of proteoglycan synthesis

CC disorder in a mammal, for inhibiting a bone or cartilage pathology

CC such as a degenerative cartilage disorder selected from osteoarthitis,

CC and organ transplant rejection. IL-17RL is protein in a mammal. An open control and a proinflammance for mouse IL-17RL is present sequence is the full

CC located on chromosome 1925.3-2924.1. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTGGAGAGACTGATGGAGCCTCAGGACACTGCACGCTGCTCTCTAGGCCTCTCCTGCCAC 120

```
The invention relates to murine cytokine receptor, Zcytor14. The Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 ligands, in preparing antibodies, in identifying proteins or peptide cleavage sites, in amino acid sequence analysis, and in monitoring biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides content activity can be used to treat inflammation, such as rheumatoid arthritis. Zcytor14 polymucleotide may be used as educational tool in genetics, molecular biology, protein chemistry and antibody production analysis, in the preparation of expression constructs for production analysis, in the preparation of expression constructs for conditionally viral or mammalian expression, in determining mRNA and DNA localisation of Zcytor14 polymucleotides by nucleic acid hybridisation, in linkage-based testing for various diseases in murine models, and to determine whether a subject se chromosomes content a mutation in the Czytor14 oligonucleotide probes are useful for in vivo diagnosis, and for detecting and localising Zcytor14 gene expression in the matic of the content of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match 69.8%; Score 1412.2; DB 6; Length Best Local Similarity 56.2%; Pred. The invention relates to murine cytokine receptor, Zcytor14. The Zcytor14 polypeptide is useful for identifying or isolating Zcytor14 ligands, in preparing antibodies, in identifying proteins or peptide cleavage sites, in amino acid sequence analysis, and in monitoring biological activities of both the native and tagged protein in vitro or in vivo. Polypeptides
                                                                                                                                                                                                                                                                                                                                                                                1860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ie; cytokine receptor; Zcytor14; inflammation; rheumatoid arthritis;

DNA encoding
         n, such as
as educational
having Zcytor14 activity can be used to treat inflammation, such as rheumatoid arthritis. Zcytor14 polynucleotide may be used as educational tool in genetics, molecular biology, protein chemistry and antibody production analysis, in the preparation of expression constructs for bacterial, viral or mammalian expression, in determining mRNA and DNA localisation of Zcytor14 polynucleotide in tissues, for identifying related polynucleotides and polypeptides by nucleic acid hybridisation, in linkage-based testing for various diseases in murine models, and to determine whether a subject's chromosomes contain a mutation in the Zcytor14 gene. Zcytor14 oligonucleotide probes are useful for in vivo diagnosis, and for detecting and localishing Zcytor14 gene expression in tissue samples. The present sequence is a degenerate form of DNA encodin murine Zcytor14 variant, Zcytor14. (AAB14560)

The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens be used as an immunogen for the production, e.g., including a DCRS can be used as an immunogen for the production of antisers or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents mouse DCRS7 reverse

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention provides a new human cytokine receptor desinated Zcytor14. Zcytor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Zcytor14 gens in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CTGGAGAGACTGATGGAGCCTCAGGACACTGCACGCTGCTCTCTAGGCCTCTCCTGCCAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to human cytokine receptor Zcytorl4 polypeptide and polynucleotide. The Zcytorl4 gene is located on human chromosome 3p25-3p24. The Zcytorl4 polypeptide, polynucleotide and antibody are useful for treating xeroderma pigmentosum, Marfan-like connective tissue disorder, cardiomyopathy, diabetes mellitus, Fanconi anaemia, renal cell carcinoma, Marfan syndrome, von Hippel-Lindau syndrome, or blepharophimosis. The present sequence is human cytokine receptor

une invention describes an isolated soluble receptor comprises at least one ZcytoR14 subunit, where the ZcytoR14 subunit comprises a polypeptide comprising fully defined 432 amino acids (SEQ ID NO. 3) or comprises amino acid residues 1-427 of a fully defined 667 amino acid sequence (SEQ amino acid residues 1-427 of a fully defined 667 amino acid sequence (SEQ iD NO. 24) given in the specification. Also described are: an isolated comprising ZcytoR14, where ZcytoR14 comprises a polypeptide having SEQ ID NO. 3; and where the soluble receptor reduces (CC propertied for SEQ ID NO. 14) or II-177 comprising fully defined 153 amino acids (SEQ ID NO. 16); an antibody or antibody fragment that binds amino acids (SEQ ID NO. 16); an antibody or antibody fragment that binds acid where the antibody and antibody fragment reduces the pro-inflammatory cc and where the antibody and the fragment reduces the pro-inflammatory activity of either IL-178 (SEQ ID NO. 14) or IL-178 (SEQ ID NO. 16); a crivity of either IL-178 (SEQ ID NO. 14) or IL-178 (SEQ ID NO. 16); a crivity of either IL-178 (SEQ ID NO. 14) or IL-178 (SEQ ID NO. 16); a crivity of either IL-178 (SEQ ID NO. 14) or IL-178 (SEQ ID NO. 16); a crivity of either IL-178 (SEQ ID NO. 14) or IL-178 or IL-179 or IL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          348

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR primers for PRO polypeptides of the invention. The sequences of the invention can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of comparing the level of expression of a PRO polypeptide in a test sample of of cells from the animal and a control sample of normal cells, whereby a comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human cused to stimulate the proliferation or differentiation of chondrocyte cells. The stimulate the proliferation or differentiation of chondrocyte cells. The susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian caube used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumors, such as prostate and breast tumors, in mammals screen for modulators of the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2380 BP; 411 A; 776 C; 743 G; 450 T; 0 U; 0 Other;
